STUDENT TECH CLASH 2026 · AI ON CAMPUS

# Rehearsal Room

Practise your presentation with an AI audience first.

by Peter Thiel's Gangbang

01 · THE PROBLEM

# Before a presentation, you don’t know how people will understand you.

### What happens

You can’t test your talk on a real audience first. So you don’t know which parts are hard to understand.

### And you are nervous

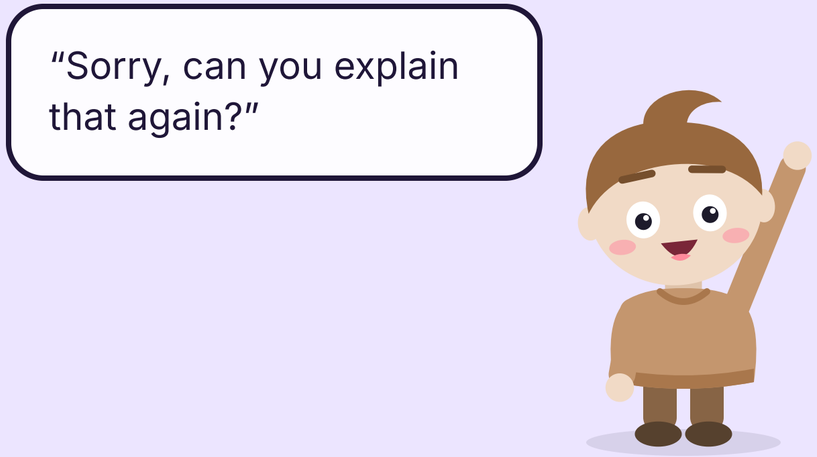

Without practice, you worry. And your mistakes happen in front of everyone.

Paolo is lost. Chen is too shy to ask.

02 · THE IDEA

# Practise your presentation with 10 AI listeners first.

**1**

### You talk

Open your slides and talk, like in the real presentation.

**2**

### They react

If they don’t understand, they look confused, or raise a hand and ask a question.

**3**

### You see your mistakes

Where people got lost, and how to explain it better.

03 · EXAMPLE

# Stefano Ferrari (Statale) practises his presentation the night before.

### Step 1

He talks too fast and uses hard words. Paolo doesn’t understand.

### Step 2

Riccardo raises his hand: “Can you explain that again?”

### Step 3

He adds a simple example. Now everyone understands.

04 · WHO IS IT FOR

# For anyone who gives a presentation.

### Who

Students, teachers, people at work, startup founders: anyone who presents.

### When

Before the real presentation. It takes 10–15 minutes. You need a laptop and a microphone.

### Important

It does not replace real people. It only shows where people may get lost. You decide what to change.

05 · HOW WE MEASURE SUCCESS

# How do we know it works?

### It finds your mistakes

Every practice shows at least one part that was hard to understand.

### It gets better after a fix

After you change it, the AI listeners are less confused.

### You feel less nervous

After practising, you feel ready for the real presentation.

### The real presentation is better

Real people ask “can you repeat?” less and understand more.

These are our goals for the first test with real users.

# Practise before you present.
